### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Douglas Fekete on 11/10/2005.

The application has been amended as follows:

#### **Claims:**

Claim 1:

- in line 8, inserted –a first portion, a second portion,— after “includes”
- in line 8, inserted –within said first portion– between “cavity” and “for”
- in line 9, inserted –inserted into said second portion– between “core” and “, and”
- in line 10, inserted –within said first portion– after “moveable plate”
- in line 13, removed “mold,” replaced with –ejector half–
- in line 14, inserted –partially– between “to” and “encapsulate”
- in line 18, inserted –up or down– between “traveling” and “within”
- in line 18, removed “mold fixture,” replaced with –ejector half–”
- in line 20, removed “wherein,” replaced with –such that–
- in line 21, removed “exposed,” replaced it with –not covered in unitizing material after molding–

Claim 11:

Art Unit: 3729

- between lines 6 and 7, inserted –performing the process of claim 1 to obtain an over molded motor stator structure, and–
- in line 7, removed “an,” replaced with –said–
- in line 8, removed “in accordance with the process of Claim 1”

For clarity, the claims (as amended by the examiner) have been included as an attachment.

2. The following is an examiner's statement of reasons for allowance:

a. The prior art does not teach (in combination with all other claim limitations) a process for preparing an over molded stator structure which includes the use of a moveable plate within a mold fixture, the moveable plate traveling up or down within the ejector half of the mold fixture so as to allow a unitizing material to only fill selected areas and achieve an over molded motor stator structure such that the internal diameter and the external diameter of the stator laminations is not covered in unitizing material after molding.

b. The prior art does not teach (in combination with all other claim limitations) a process for preparing an over molded motor comprising constructing a rotor assembly on a rotor shaft, said rotor assembly being adapted for support by bearings located near end portions of said rotor shaft, and rotatably disposing said rotor assembly into an over molded motor stator structure by inserting said rotor assembly into the central bore of said over molded motor stator structure,

Art Unit: 3729

and such that the process of part a is used as a step of the current process to create said over molded motor stator.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
